

ABSTRACT OF THE DISCLOSURE

A quick connect assembly constructed in accordance with one embodiment of the present disclosure is used for connecting a building element to a mounting member. The quick connect assembly includes a first locking member coupled to one of a building element or a mounting member. The first locking member includes a first passageway extending through the first locking member. A second locking member is coupled to the other of the building element or the mounting member. The second locking member includes a second passageway extending through the second locking member. The first and second locking members have co-operative cam locking elements to reversibly couple the building element to the mounting member.
